

Let's Make a Door Fiddle

Supplies: door, rope, weight, box

Start by tying one end of the rope in a knot to a heavy weight. The weight can be anything heavy such as a book. Select something that cannot be pulled under the door. Place the heavy weight on the floor in front of the door and slide the rope under the door.

With the rope on the backside of the door, pull it up and place it over the top of the door. Give it a good tug so it is nice and tight. Keeping the rope tight, bring it down and under the door again. Give it another big tug. Place it over the top one more time and pull it tight.

Next wrap the rope three times around the door handle and tie it securely with a knot.

Slide a box (game box, shoe box, etc.) under the long rope on the front side of the door. Turn the box so it is pulling the rope away from the door. Strum the rope above or below the box. Slide the box up or down the rope to make different pitches.
